28

Body Temperature

36.7°

Basal Body
Temperature

36.4°

Hormone Level

FSH (Follicle stimulating
hormone)

LH (Luteinizing hormone)

Estrogen

Progesterone

Menstrual Cycle

Follicular

Ovulatory

Luteal

Menstruation

Cramp

Tiredness

Insomnia

Bloating

Avoid Fatty food, alcohol, carbonated drinks, caffeine, salty food

For sugar fix, try snacking on fruits such as berries.

First few days: Exercise gently - relaxation - super light training

If experiencing cramp + bloating, core unit will be weaker -> body can be vulnerable to injury if weights are too heavy

First day of period is good to start a diet, because progesterone and insulin levels are low. You may feel less hungry than usual.

Mid follicular phase

Energy rises

More upbeat

Pain resistant

Strength training

Resistance training

can increase load, intensity, or weight

Late follicular phase

Optimistic & Social

High pain tolerance

Feel confident

Mood stability

Better skin appearance

High intensity training

Strength training

Resistance training

Energy is at peak.

Can do few workouts that use max efforts: for example, shorter, "all-out" effort sprints

Ovulation

Increase risk of injury

Watch out for ACL ruptures

Ligament laxity is greater, which is very common in football and rugby

Increase in quadricep strength during ovulation

Avoid training too much

Avoid training that place tension on ligaments

training related to quadricep

Post-Ovulatory

Sudden hormone changes

Decrease in estrogen

Intense emotion

Tiredness

Mid- Luteal

Breakouts & sensitive skin caused by excess oil

Decrease in estrogen

Progesterone surges

Bloating

Low libido

Sluggishness

Breast Tenderness

Constipation

Pre-Menstruation

Insomnia

Irritability

Poor Concentration

Backpain

Cramps

Delayed onset sweating

Increase in breathing

Appetite change

Bloating

Sore Breasts

Monitor Body Temperature

Less oxygen available for muscles during exercise

Light activities is better (ex.yoga)

Dietary suggestions

Lower sugar intake
Lower caffeine
Keep hydrated

Third Week

Focus on Metabolic conditioning, or circuit-style training

Reduce overall load, use moderate weights

Shift towards mixed style training.

Aerobic training

Moderate loads, longer, less intense workouts

Should keep hydrated and be mindful of increased core temperature

Progesterone peaks Day 19-22
